What's growing in the poly tunnels ?

The runner beans are making a lot of growth inside the poly tunnel at the moment. The stems wrap themselves around the canes. You can see the new growth pushing through creating broad **leaves**, **shoots** and then **flowers**.

Peas are established and growing well at the other end of this tunnel. They will soon flower and create pods filled with 5 or 6 peas each.

Peas are small, round vegetables. They are high in protein and full of vitamins. Peas are among the oldest plants grown in the world. They belong to the family of plants called legumes.
